Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2857

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-23 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Wentland et al. (US 2004/0098200 A1).

The reference teaches the derivation of templates and classifiers as defined by manual and automatic modes and by use of plural parameters criteria (i.e. “constraints”), and from these and other controls they are combined by Boolean-logic as defined by the system user and the geophysical 3D substrata maps are generated and displayed. The various options and re-iteration capabilities of the workstation system allow the operator to manipulate the combinations of data functions, templates, classifiers, and other constraints to define the final display screen image product. The use of the various types of data, types of operations upon the data (e.g. derivatives, fuzzy analysis) are taught by this reference. Note that “discontinuity” (e.g. claim 6) is met by the detection and display of faults, another term used for the same concept features.

Note the Provisional Applications of the applied reference have earlier filing dates.
